an applicator removably mounted to said massage head for transferring the mechanical oscillations to the body along at least one surface of the applicator, said applicator further having a cavity substantially the size of the surface formed in the applicator for permitting skin to be drawn inwardly of the applicator, and a connection tube integrally formed in said applicator, said tube communicating with said cavity, said connection tube capable of applying at least a partial vacuum to the cavity so as to draw and stretch fibrous tissue of the human body within the cavity said connection tube being removable with said applicator and adapted to pass contaminants from the cavity;

a vacuum pump associated with said housing; and

a connection between said vacuum pump and said applicator to impart at least a partial vacuum in the cavity of the applicator so that placement of the head on a human body results in the application of a force combination of mechanical oscillation and suction, said connection including a suction line carried externally of said drive cable, said suction line having a first end operatively connected to said vacuum pump and a second end operatively attached to said connector tube, said suction line drawing contaminants from the cavity through said connection tube.

15. (Twice Amended) A therapy massage device comprising:

a housing;

a motor mounted to the housing;

a vacuum pump mounted to the housing;

a drive cable operatively connected to the motor;

a massage head operatively driven by the cable;
